EDUCATION

BSc (Hons) Computing Science — University of Strathclyde, Glasgow

2023 – 2027

Projected degree: First

Relevant modules: AI Foundations, Networking and Concurrency, Advanced Programming, Logic and Algorithms, Computer Systems and Architecture, User and Data Modelling, Quantitative Methods for Computer Science

PROJECTS

Grademap — Desktop academic companion app

2025 – Present

- Independent personal project, designed and built solo with Electron, React, TypeScript, Zustand and Supabase; also ships as a hosted web build.
- Designed and built the full design system from scratch, with a library of primitive components composed upward into every page to keep interactions consistent across the app.
- Core engine calculates a student's standing and projects the marks still required to reach a target grade, then converts that into a ranked view of what to work on next.
- Scoped v1 by cutting an initially expansive feature set down to a single clear user loop, informed by competitive research across existing grade-tracking products and feedback from real testers.

Networked Chat Application — Java, TCP and UDP sockets

Apr 2026

- Built a multi-user chat application in Java using both TCP and UDP sockets, supporting text messaging alongside live webcam and video sharing between clients.
- Handled shared state concurrently across connected clients, including user sessions and persistent message history, using Java threading and synchronisation to keep reads and writes consistent under simultaneous access.
- Chose transport per data type: TCP where ordering and delivery mattered for messages and history, UDP for live video where latency mattered more than reliability, handling packet loss and reordering in the video path directly.

Unix Shell — Systems programming in C

Jan – Apr 2025

- Built a Unix-like shell in C supporting internal and external commands, aliasing and command history; implemented process creation and control via fork/exec alongside file handling and direct system calls.
- Worked in a small team using Git for version control, with modular integration across contributors.

EXPERIENCE

Shift Leader — Tesco, Glasgow

Mar 2025 – Present

- Lead shifts on the floor: delegate tasks across the team, train new colleagues, and ensure time-critical routines are completed to schedule.
- Diagnosed and resolved faults in in-store systems and handled escalated customer complaints; monitored store data across multiple areas to verify routines were being completed correctly.

Receptionist — Fraser Suites, Glasgow

Jun – Sep 2024

- Managed reservations and administrative tasks in the hotel management system, handling check-ins, guest requests and complaints.
- Coordinated across departments to resolve guest issues quickly during peak periods.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C, C++, SQL, HTML, CSS

Frameworks & libraries: React, React Native, Electron, Zustand

Tools & platforms: Git, Supabase / PostgreSQL, Unreal Engine 5

ADDITIONAL

Young STEM Leader (2023): Designed and delivered science sessions for primary school pupils, including writing and teaching a lesson on programming BBC micro:bits.

Hackathon (2026): Entered the GDG on Campus Aberdeen hackathon solo and shipped a working application within the event window, built to the given tracks around Google's open-weight model Gemma 4.

Half Marathon: Completed the EMF 2026 Half Marathon raising money for Scottish Autism

Interests: Brazilian Jiu Jitsu, bass guitar, gym
