EDUCATION

BSc (Hons) Computing Science — University of Strathclyde, Glasgow 2023 – 2027
Expected: First Class Honours (current average 70%)
Relevant modules: AI Foundations, Networking and Concurrency, Advanced Programming, Logic and Algorithms, Computer Systems and Architecture

PROJECTS

- Grademap** — Desktop grade tracker and academic planner | grademap.net Nov 2025 – Present
- Built a standalone cross-platform application solo using Electron, React and TypeScript; integrated Supabase for backend services and automated deployment through a GitHub Actions CI/CD pipeline.
 - Designed a logic engine that calculates the marks needed to hit a target grade, handling complex weightings and incomplete data to produce a prioritised task list.
 - Designed and implemented a custom design system of over 200 tokens and reusable UI components, giving a consistent interface and interaction model across the app.
 - Cut the scope to a single core loop to define the MVP, then iterated on closed beta feedback and analysis of existing grade-tracking tools.
- Momentum** — Solo hackathon build, GDG on Campus Aberdeen | github.com/energizee/gdgstudyapp June 2026
- Shipped a complete working product inside the 6-hour event window as a solo entrant against teams of 2–3: a personalised study companion built with React, TypeScript and Next.js.
 - Used Gemma, Google’s open-weight LLM, to maintain a live-updating profile of the user’s study data and habits, generating tailored study plans with auto-generated practice questions that the model then marked automatically.
- Networked Chat Application** — Java Networking | Coursework Apr 2026
- Developed a Java multi-user communication platform using TCP and UDP sockets for real-time messaging, file transfer and integrated webcam video streaming.
 - Implemented concurrency control over shared state with threading and synchronisation primitives, keeping user sessions and persistent chat logs consistent.
- Unix Shell** — Systems programming in C | Coursework Apr 2025
- Built a Unix-like shell in C supporting internal and external commands, aliasing and command history.
 - Implemented process creation and control via fork/exec alongside file handling and direct system calls; built in a small team using Git.

EXPERIENCE

- Treasurer** — GDG on Campus Strathclyde Sep 2026 – Present
- Own the society’s finances: maintain financial records, manage the budget, and track income and expenditure across all events and activities.
 - Prepare event budgets and funding applications, handle reimbursements, and coordinate with the Students’ Union on financial procedure and compliance.
- Shift Leader** — Tesco, Glasgow (part-time) Mar 2025 – Present
- Lead shifts on the floor: delegate tasks across the team, train new colleagues, and ensure time-critical routines are completed to schedule.
 - Diagnosed and resolved faults in in-store systems, handled escalated complaints, and monitored store data to verify routines were completed correctly.
- Receptionist** — Fraser Suites, Glasgow Jun – Sep 2024
- Managed reservations and administrative tasks in the hotel management system, handling check-ins, guest requests and complaints; coordinated across departments to resolve issues quickly during peak periods.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C, C++, SQL, HTML, CSS
Frameworks & libraries: React, Next.js, React Native, Electron, Zustand
Tools & platforms: Git, GitHub Actions (CI/CD), Supabase / PostgreSQL

ACHIEVEMENTS AND INTERESTS

Young STEM Leader (2023): Created and delivered hands-on science lessons for primary school pupils in the local area, including a lesson on programming BBC micro:bits.
Half Marathon: Completed the 2026 Edinburgh Marathon Festival Half Marathon, raising money for Scottish Autism.
Interests: Brazilian Jiu Jitsu, bass guitar, gym, chess
