EDUCATION

BSc (Hons) Computing Science - University of Strathclyde, Glasgow 2023 - 2027

Dissertation (in progress): Static analysis, controlled scheduling and automated mutation testing for concurrent Java programs
Expected: First Class Honours (current average 70%)

PROJECTS

JPMorganChase Code for Good (Winner) - Impact platform for West Lothian 50+ Network Oct 2026

- Won first place as part of a team of four, building a full-stack impact platform for a charity's members, volunteers and staff in 24 hours. I owned the data model and the Express, PostgreSQL and Drizzle ORM backend, and helped shape the member-facing design.
- Designed member feedback around older users, showing one event at a time with large controls for accessibility, and mirrored the charity's paper forms so digital and paper responses combine with validated scales into one wellbeing score for funders.
- Built context-aware follow-up questions with Gemini through a server-side client that falls back to scripted questions on failure, and covered auth, permissions, privacy and the fallback with 45 integration tests against a real Postgres database.

Grademap - Cross-platform grade tracker and academic planner | grademap.net Nov 2025 - Present

- Designed the calculation engine that works backwards from a target grade to the marks still needed across weighted, partly-marked assessments, turning incomplete data into a prioritised list of what to work on next.
- Guarded schema changes with a migration process that refuses to run unless the target environment is typed out and confirmed, keeping staging and production changes deliberate and separate.
- Built and shipped the full stack alone: a React and TypeScript front end deployed on Vercel, a PostgreSQL database secured with row-level access policies and serverless functions in Deno, and an automated CI/CD pipeline.

Momentum - Solo hackathon, Google Developer Group on Campus Aberdeen | github.com/energizee/gdgstudyapp Jun 2026

- Shipped a complete working product inside the 6-hour window as a solo entrant against teams of 2-3: a personalised study companion built with Next.js and TypeScript.
- Routed all model calls through one server-side endpoint handling 10 task types, keeping the secret key off the client and centralising caching, timeouts, and fallback behaviour in a single place.
- Treated model output as untrusted input, validating every response against real record identifiers, permitted values, and numeric limits before it reached the application.
- Cut response time roughly 3.5x, from 5.0 to 1.4 seconds, by reducing the model's reasoning budget.

EXPERIENCE

Founder & Full-Stack Developer - Grademap Ltd Oct 2026 - Present

- Sole director and developer, owning product direction, engineering and operations end to end
- ICO-registered data controller for students' academic data, balancing user privacy and compliance against shipping speed
- Own product management and roadmap prioritisation, alongside full-time study and part-time work

Treasurer - Google Developer Student Club Sep 2026 - Present

- Own the society's finances: maintain financial records, manage the budget, and track income and expenditure across all events.
- Prepare event budgets and funding applications, handle reimbursements, and coordinate with the Students' Union on financial procedure and compliance.

Shift Leader - Tesco, Glasgow (part-time) Mar 2025 - Present

- Lead shifts on the floor: delegate tasks across the team, train new colleagues, and ensure time-critical routines are completed to schedule.
- Diagnose and resolve faults in in-store systems, handle escalated complaints, and monitor store data to verify routines are completed correctly.

TECHNICAL SKILLS

Languages: Java, TypeScript/JavaScript, C, SQL, Python
Backend & data: Node.js, Express, PostgreSQL (schema design, row-level security), Supabase, Drizzle ORM, REST APIs
Frontend: React, Next.js, Zustand
Tools: Git, GitHub Actions (CI/CD), Vitest

ACHIEVEMENTS AND INTERESTS

Young STEM Leader (2023): Designed and delivered science lessons for primary school pupils, including one on programming BBC micro:bits.
Half Marathon: Completed the 2026 Edinburgh Marathon Festival Half Marathon, raising money for Scottish Autism.
Interests: Brazilian Jiu Jitsu, bass guitar, gym, chess
